

Labs

In the Labs section of this site you can find technical showcases by Indentity. We demonstrate the lesser known features in web-development.

Django 101 - Online Django Course

Indentity is specialized in Django development; Since we think more developers should try out Django we've created an online audio course to learn Django. The course consists of 22 chapters covering all the basics to learn Python and Django. The course has been created in a specially designed HTML5 environment where audio and content compliment each other. The first chapter is available for free on Django101.com.

Groepslijstje.nl, shared wishlists

Groepslijstje.nl is a Dutch initiative for creating grouped wishlists. Say you invite the whole family over for Christmas and ask everyone to bring a gift for someone else. Groepslijstje.nl comes to the rescue here by making it possible to create individual wishlists and share them in a group.

Groepslijstje.nl is a free service provided by Indentity and is powered by the Google App Engine. Python, Flask, HTML5 boilerplate, jQuery and the App Engine API were used to create it.

Easy TAN Android Application

Easy TAN is a Dutch Android application developed by Indentity to make the life of Dutch ING bank customers easier. Easy TAN shows the security check code of a transaction directly on the screen of your mobile phone in stead of sending it to the SMS inbox of your phone.

Automatic maps

Use the geolocation possibilities of your browser to calculate a route without filling in your address.

Multitab bookmarklet

Create a bookmarklet which opens multiple tabs with a single click.
